## Features for ESF Model Yard Ramps:

← When not in use the pump handle stores conveniently next to the pump.

Pump is **double acting** which means the ramp is being raised with each stroke of the handle, in both directions.

← Ramps have 8 1/2" curb with 48" of treadplate at the entry end of the ramp. This gives the lower end more support in the "punishment area." This insures longer life of the ramp and less damage to the grating.

Lip end of the yard ramp is equipped with anti-theft safety chains that the ramp may be secured to the dock or the back end of a trailer.

← Tow bar is standard equipment. Normally comes with eyelet to secure to rear of lift truck.

Tow bar storage area on ramp

← All steel carriage assembly houses the wheel and hydraulic cylinder system. (Shown with 18" x 5" solid rubber tires)

Shows optional pneumatic tires.
