Aluminum Van Ramps

4 1/2" high rails, with 2 1/8" curb height, make ramps safer and stronger, especially for longer length ramps.

Tapered bottom at the lower end of ramp makes loading of heavy goods easier. No bump which is objectionable to many customers.

Serrated flooring gives good traction.

Optional -Perforated Decking is recommended for customers in Snow Belt Regions

AVR

Model:

Example Model No.
AVR 2914

overall width in inches

total length in feet

Standard Nose Style

Comes standard with a 6" lip and 40" long safety chains and grab hooks.

Optional Hook Nose

Deduct \$40 from list price. Slots must be cut in door sill to accommodate hooks. Provides solid locking.

- NOTE:**
- Width shown is overall width, useable is 3" less on both the regular and economy Van Ramps. On models with perforations, perforations are in center 12 1/2" of ramp. This allows wheels of hand cart to go outside of perforations for smoother rolling.
 - Capacities shown are for 4 wheel trucks only. On 2 wheel trucks use 1/2 the listed capacity.
 - * Recommended Maximum Height is maximum height for day in day out use.
 - Van Ramps are **not** designed for pallet truck use.

*** Shipment 10-14 days

Freight Classification: Item 168720 Class 100 ***

Options

Longer lips available at additional charge. Add.. \$ 80.00 to list price.

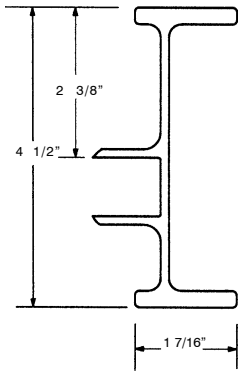

& Economy Van Ramps

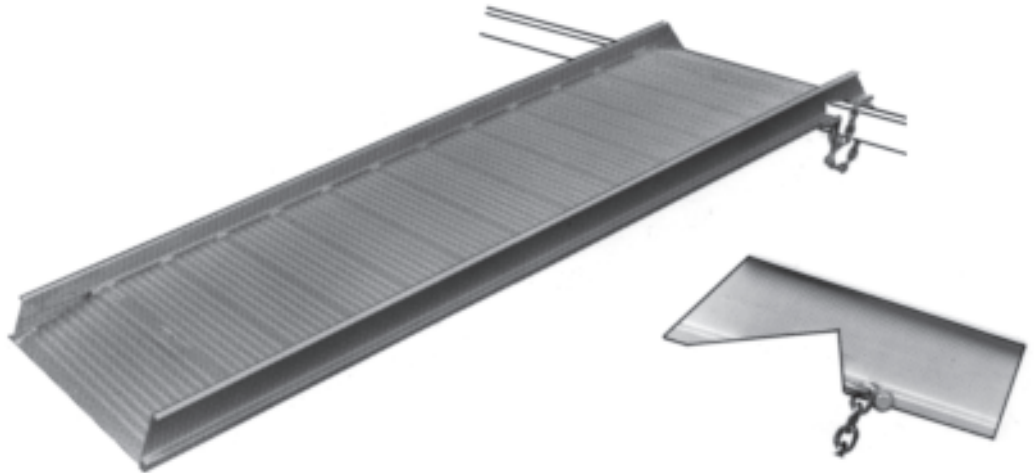

This ramp is made like our competitors Van Ramps. All ramps have the same serrated deck surface and are available with perforations just as our standard Van Ramp. **What makes these ramps different from our normal Ramps are the following features or lack of features:**

1. Bump at bottom of Ramp - Makes first 10 inches of ramp at a steeper slope. This makes it harder to get up the ramp with heavy loads.
2. Ends are cut off - Not rounded - More chance of tripping and scuffing shoes.

So if you are unloading and have minimal use requirements, the Economy Van Ramp may very well be your answer.

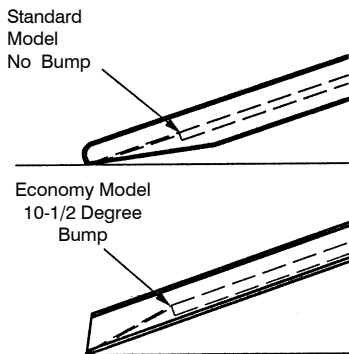

Side Rails

Now uses same rail as our Normal Van Ramp. The 4-1/2" high curb is stronger and will enable you to carry heavier loads with less deflection

Both Ramps are at 18 degree Slopes

Bottom is not tapered as in our Standard Model.

This takes less time to manufacture and allows ramp to go down lower than our standard model. Only draw back is there is a 10-1/2 degree bump at the lower end and the ramp is now at a 28-1/2 degree slope on this bottom portion. This is objectionable when going up the ramp with heavy loads.
